

FOR IMMEDIATE RELEASE

**Chinook Medical Gear Introduces Innovative Solution for Hemorrhage Control:
The Individual Direct Pressure Adjunct™ (IDPA™)**

TULSA, OKLAHOMA - Chinook Medical Gear, a leading provider of medical equipment and solutions, proudly unveils its latest innovation: the Individual Direct Pressure Adjunct (IDPA). Engineered to address the critical need for effective hemorrhage control in emergency situations, the IDPA offers a hands-free solution for applying direct pressure on compressible hemorrhages and dressed wounds.

The IDPA is specifically designed to provide additional pressure on top of a dressed wound or in areas where compressible hemorrhage requires heightened control. Its unique design allows for secure attachment to a tourniquet, ensuring stability and accuracy during application.

"When every second counts in a life-threatening situation, having the right tools can make all the difference," said Ben Crowder, CEO at Chinook Medical Gear. *"The IDPA is a result of our commitment to developing innovative solutions that empower first responders, medical professionals, and individuals to effectively manage emergencies and save lives."*

Key features of the IDPA include:

COMPACT, LIGHTWEIGHT, AND PORTABLE: The IDPA measures 2.75" H X 3.25" W X 3.25" D, weighs 3.2 oz, and easily stored in a cargo pocket, or medic bag.

HANDS-FREE COMPRESSION: Easily attaching to a tourniquet, the IDPA enables hands-free compression, allowing responders to focus on other critical tasks while maintaining pressure on the wound.

SIMPLE AND AFFORDABLE: When used as directed, the IDPA offers a simple and affordable solution for managing hemorrhage emergencies. It is designed to easily attach to a tourniquet to improve patient outcomes.

It is crucial to note that the IDPA should not be applied over solid objects within clothing to ensure optimal performance and safety.

Chinook Medical Gear remains dedicated to advancing medical solutions that enhance preparedness and response capabilities in challenging environments. The IDPA exemplifies this commitment by providing a reliable tool for hemorrhage control in various emergency scenarios.
